HDMI EXTENSION BOARD — SEN0312 CONNECTIONS, POWER AND MOUNTING

Function: HDMI/DP connector breaks the board power, FPGA I/O, CPU and SD connections, +5 V, 3V, 3.3 V rail and GND. GPIO mount the module.

Source / changes: Seed Kits, SEN0312-M0, (c) 2022-05-09, https://docs.seeedstudio.com/thumbnails/FAQ/SeeedFabBoard.jpg, 2021-11-05, Load symbol for custom HDMI out on Jetx, 5V5, Input is 12 V, program out with 5 V.

FRONTEND 5 V POWER | CUSTOM MICRO-HDMI PORTS — NOT STANDARD HDMI

+5V_IN
TPS54202DDCR
+5V_OUT
Schottky 20V, 1 A, SOD-323 or SOT-23 package, 0.3 V typical drop
Protects against reverse polarity if the 5 V rail is back-fed
Input: nominal 5 V (USB/HDMI connector VBUS), 4.75 V min, 5.25 V max
Output: 5 V ± 5 %, 1.5 A continuous, 2.5 A peak for 1 s, 100 mV p-p ripple max
Load: HDMI TMDS + DDC + CEC + HPD + 5V, 3 × 74LVC2G34 buffers, 2 × 74LVC2G125 buffers
Total load: ~0.5 A typical, 0.8 A worst case, 1.0 A absolute max
Use separate 5 V rail for HDMI, not the FPGA core rail
Add 100 mA polyfuse on each HDMI 5V line for ESD protection
Add 10 kΩ pull-up on HPD to 5 V, and 2.2 kΩ pull-down on CEC
Add 100 Ω series resistors on TMDS lines close to connector
Add 10 nF ceramic bypass capacitor on each 5V pin
Add 1 kΩ pull-up on SDA and SCL to 5 V
Add 100 Ω series resistors on SDA and SCL
Add 10 nF ceramic bypass capacitor on each 5V pin
Add 1
